Fluxnova Platform (/fluxnova-welcome/index.html)

Overview

This example allows you to walk through the features of Fluxnova Platform guided by a simple invoice process.

Get started with the example by logging into the Fluxnova Tasklist (/fluxnova/app/tasklist/) using the credentials `demo:demo` .

Available Personas

The following logins are provided by the showcase and can be used to play around with the invoice process:

Username	Password	Groups
demo	demo	Sales, Accounting, Management
john	john	Sales
mary	mary	Accounting
peter	peter	Management

Async Continuation Demo

This process allows you to experiment with asychronous continuations (https://docs.fluxnova.finos.org/user-guide/process-engine/transactions-in-processes/#asynchronous-continuations):

1. Start a new instance of the *Invoice Receipt* process.
2. Log into monitoring. Select an instance of the *Invoice Receipt* process.
3. Add a variable named `shouldFail` to the process and set it to `true`
4. Using the tasklist, make the process advance to the *Archive Invoice* service task.
5. Back to monitoring, you see an Incident which has been created for the service task.
6. Set the value of the variable `shouldFail` to `false` and increment the retries of the failed job. As a result, the process instance is completed.
